

ABSTRACT OF THE DISCLOSURE

5 The invention provides a dispersion having an oily phase, an aqueous phase, in the
form of an oil-in-water emulsion or a water-in-oil emulsion, and at least one active
ingredient that is only slightly or with difficulty soluble in the oily phase and the aqueous
phase. The dispersion is free from toxicologically dangerous organic solvents. The
dispersion contains the active ingredient dissolved in a quantity that is greater than the
10 quantity which results additively from its maximum solubility in the oily and the aqueous
phase of the emulsion prior to forming the emulsion.
